

homework 3 & 4

5+5 = 10 marks total

a small (~ 5 page report)

take your favorite lab and algorithm

- train it for a very long time (24+ hours)
- plot the training curve of performance vs env_steps taken

In the report:

- analyze key behaviour changes of your agent during training
 - e.g. around step xxxx the agent learned how to do yyyy
- summarize your insights / findings
- what worked, what didn't work
